AMD Radeon GPU + ROCm 6.2

Content Studio

Photos + Theme + Text → One-Click AI Article Generation

Vision-driven image placement · ComfyUI style transfer · Direct WeChat publishing · All on AMD GPU

🎨 CREATIVE SCENARIOS

Photo Style Transfer

Upload any photo → transform into anime, cyberpunk, watercolor, oil painting, ink wash, or pixel art. 8 presets, per-photo selection.

Vision-Based Image Placement

AI reads each photo's content (text on screenshots, scenes) and places it in the most relevant article section automatically.

AI Text-to-Image

Custom prompts generate brand-new illustrations. "A gaming PC with RGB lights, cyberpunk style" → ComfyUI renders it on AMD GPU.

One-Click Publishing

Complete article with images → directly to WeChat draft box via official API. No copy-paste, no manual upload.

🪜 PIPELINE

User Input
Photos + Theme + Text + Style

↓

Text Generation
Qwen3.6-35B on AMD GPU (Radeon Cloud)
Writes article + reads photos for placement

Editable Preview
Edit text · Drag images · Regenerate · Export HTML/PDF

↓

WeChat Draft Box
One click → article + images in draft box

💡 PRACTICAL VALUE

~3 min
from upload to published draft

Replaces: write article (30 min) + style photos (20 min) + place images (10 min) + format + publish (15 min) = 75+ min manual work

🔧 Replace Manual Workflow

No more: ChatGPT for text → separate photo editor → manual image placement → copy-paste to WeChat editor → re-upload images

🎯 Smart, Not Random

Vision model ensures screenshots go to the right section. Style presets unify visual identity. Article templates match the use case.

🔄 Iterative by Design

Not happy? One click to regenerate. Edit any word. Drag any image. Re-export. Re-publish.

📦 Ready to Ship

92 tests · Desktop .exe · English UI · ROCm migration guide · Demo script

🔴 POWERED BY AMD RADEON GPU + ROCm 6.2

Inference Acceleration | Lightweight Deployment | Style Customization | Image Quality
