Find it

Private AI video search with local VLM + ASR

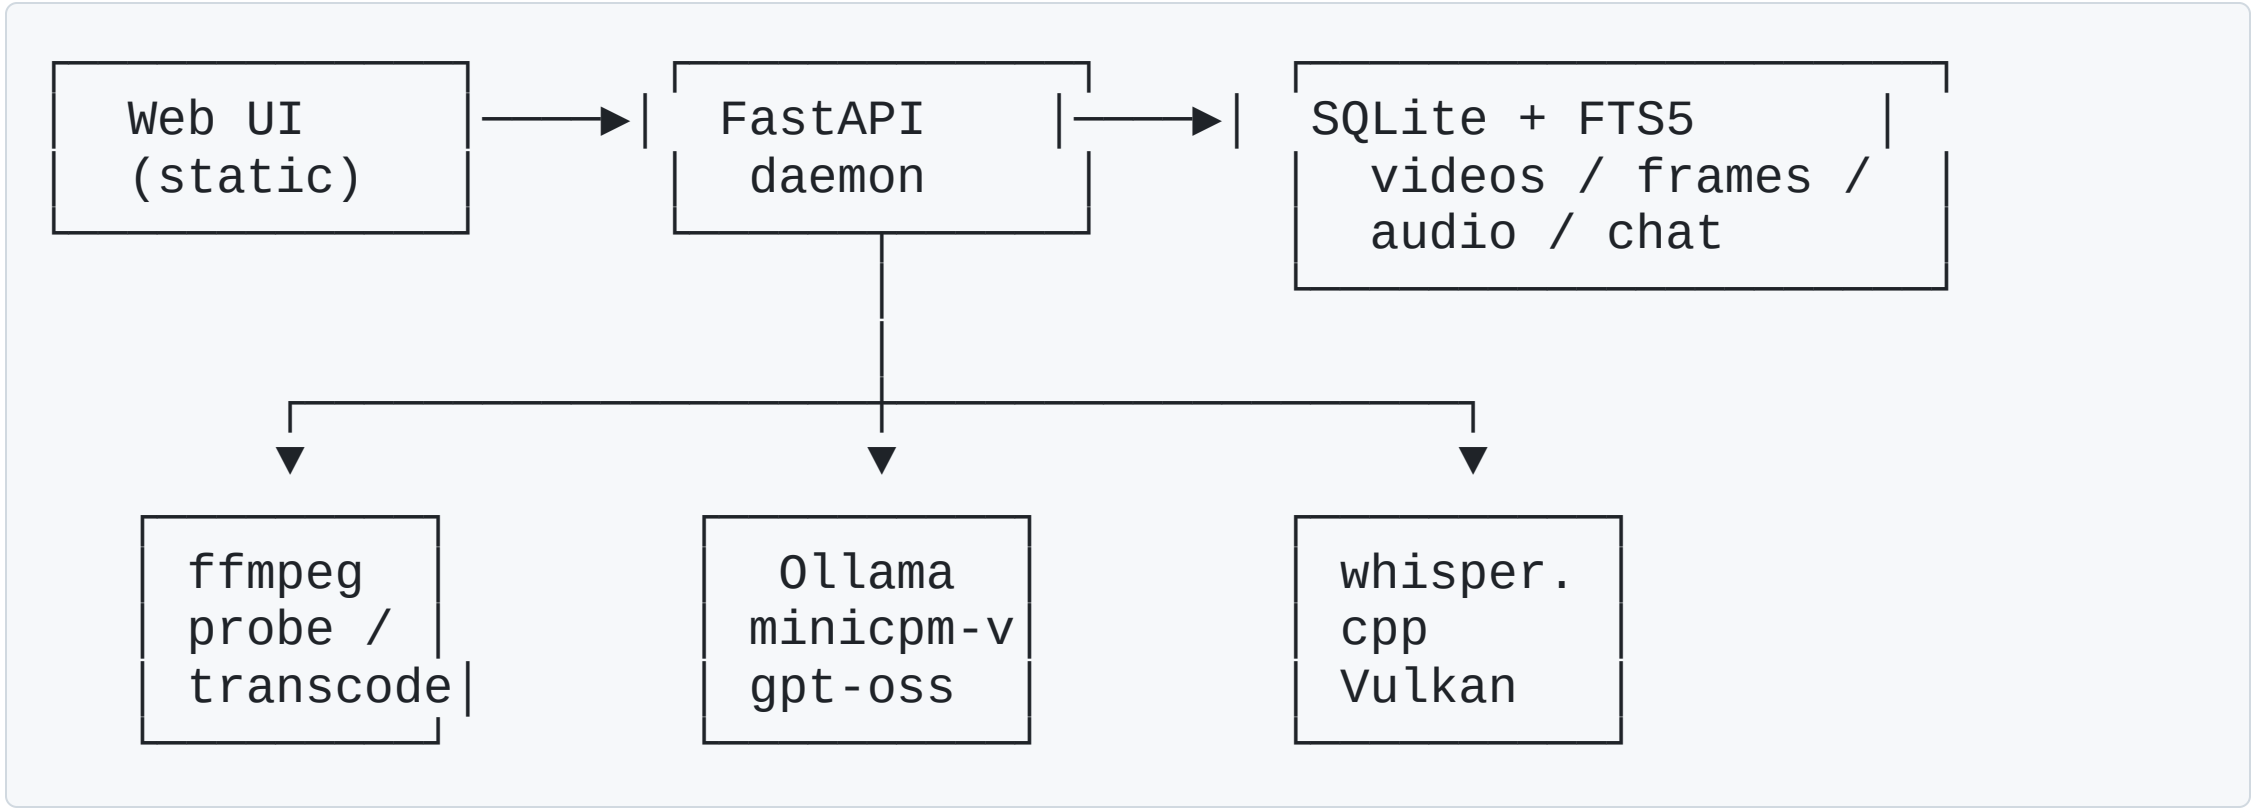

- Local vision-language model: `minicpm-v4.5:8b`
- Local agent LLM: `gpt-oss:20b`
- Local ASR: `whisper.cpp` (Vulkan)
- Backend: FastAPI + SQLite + ffmpeg

What is Find it?

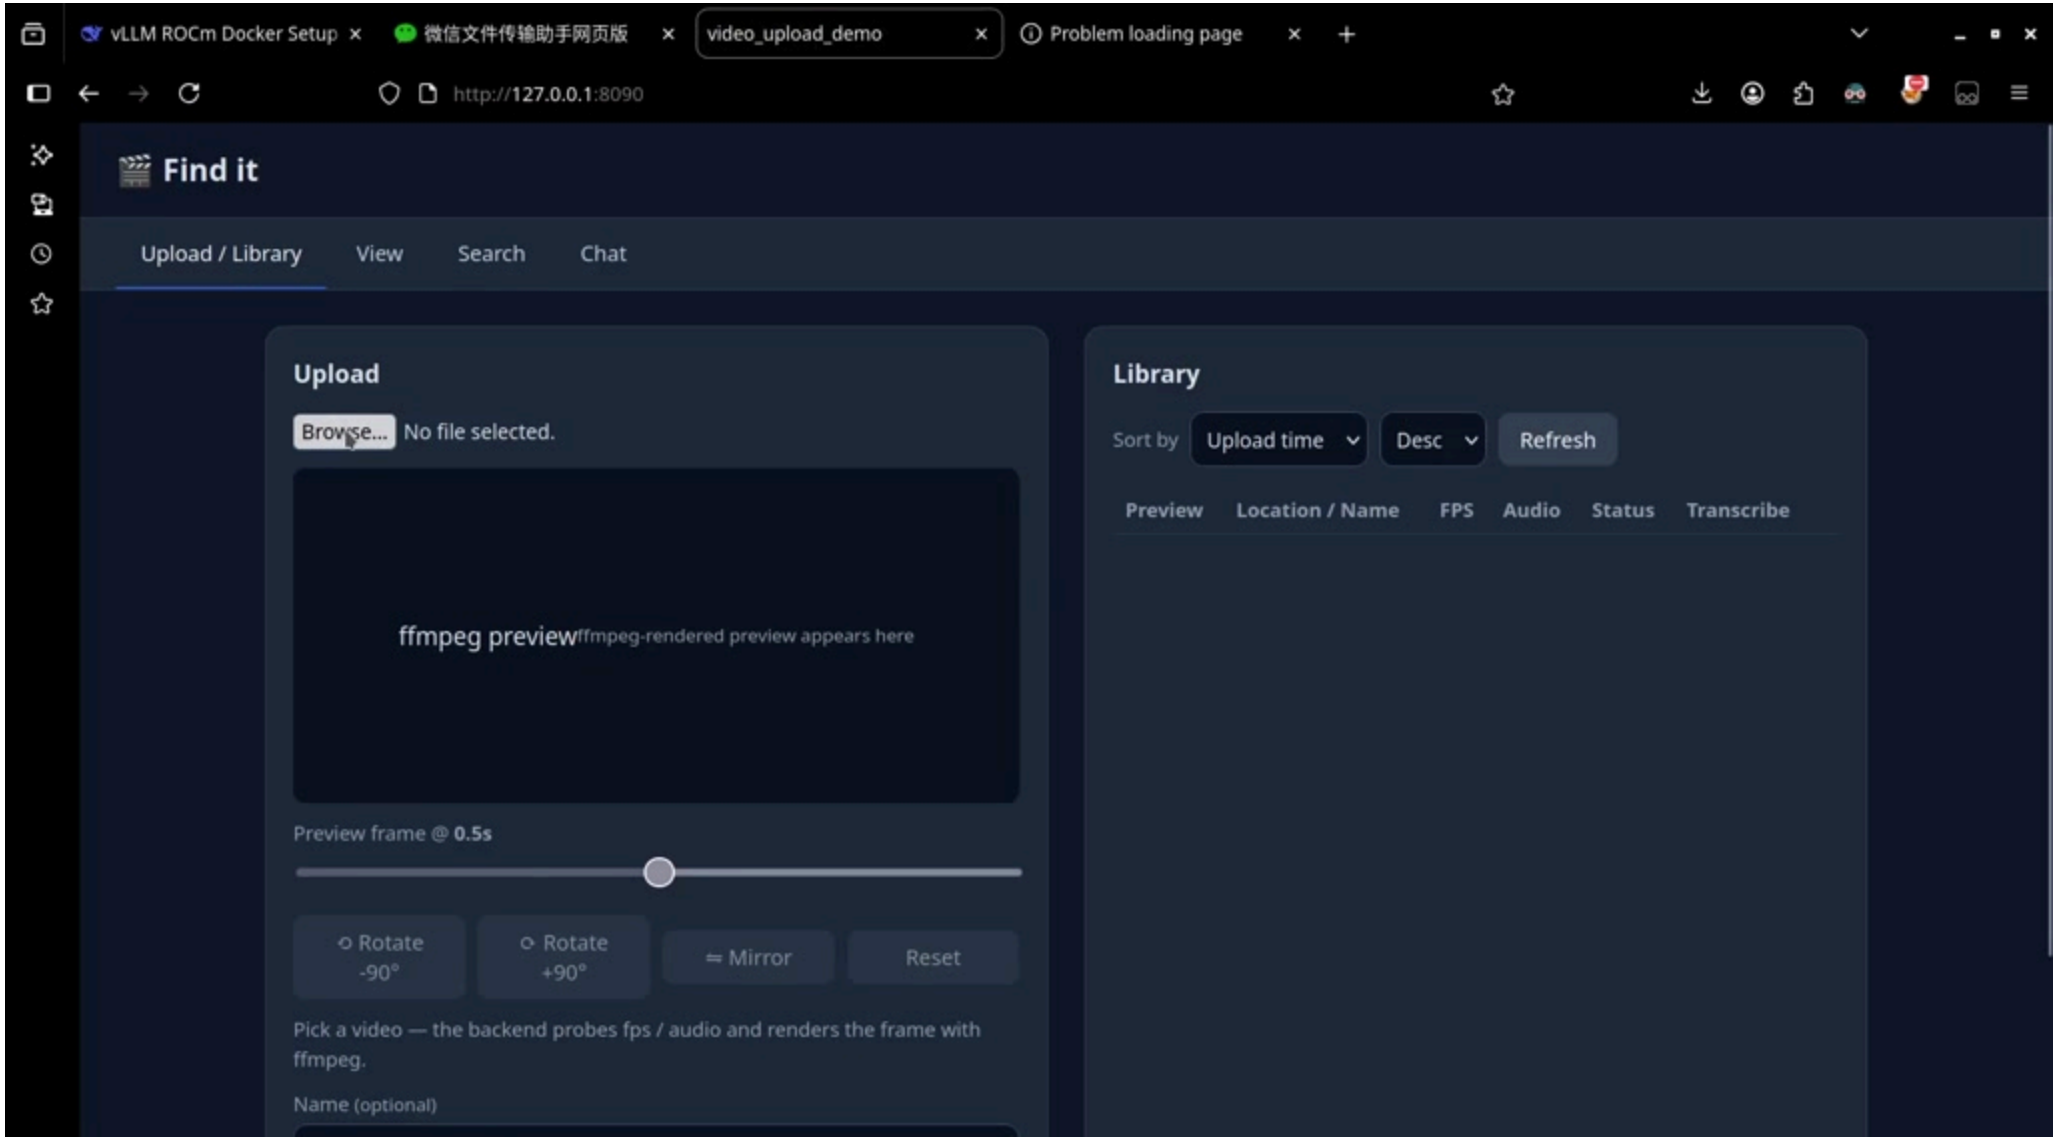

Find it helps you find things by recording and uploading videos, then analysing them. It is a self-contained FastAPI web app that catalogues your recordings, extracts frame descriptions and audio transcriptions with local AI models, and lets you search across everything — or ask an agentic chat — to locate the moment or object you are looking for.

All AI runs locally on an AMD Radeon GPU via Ollama.

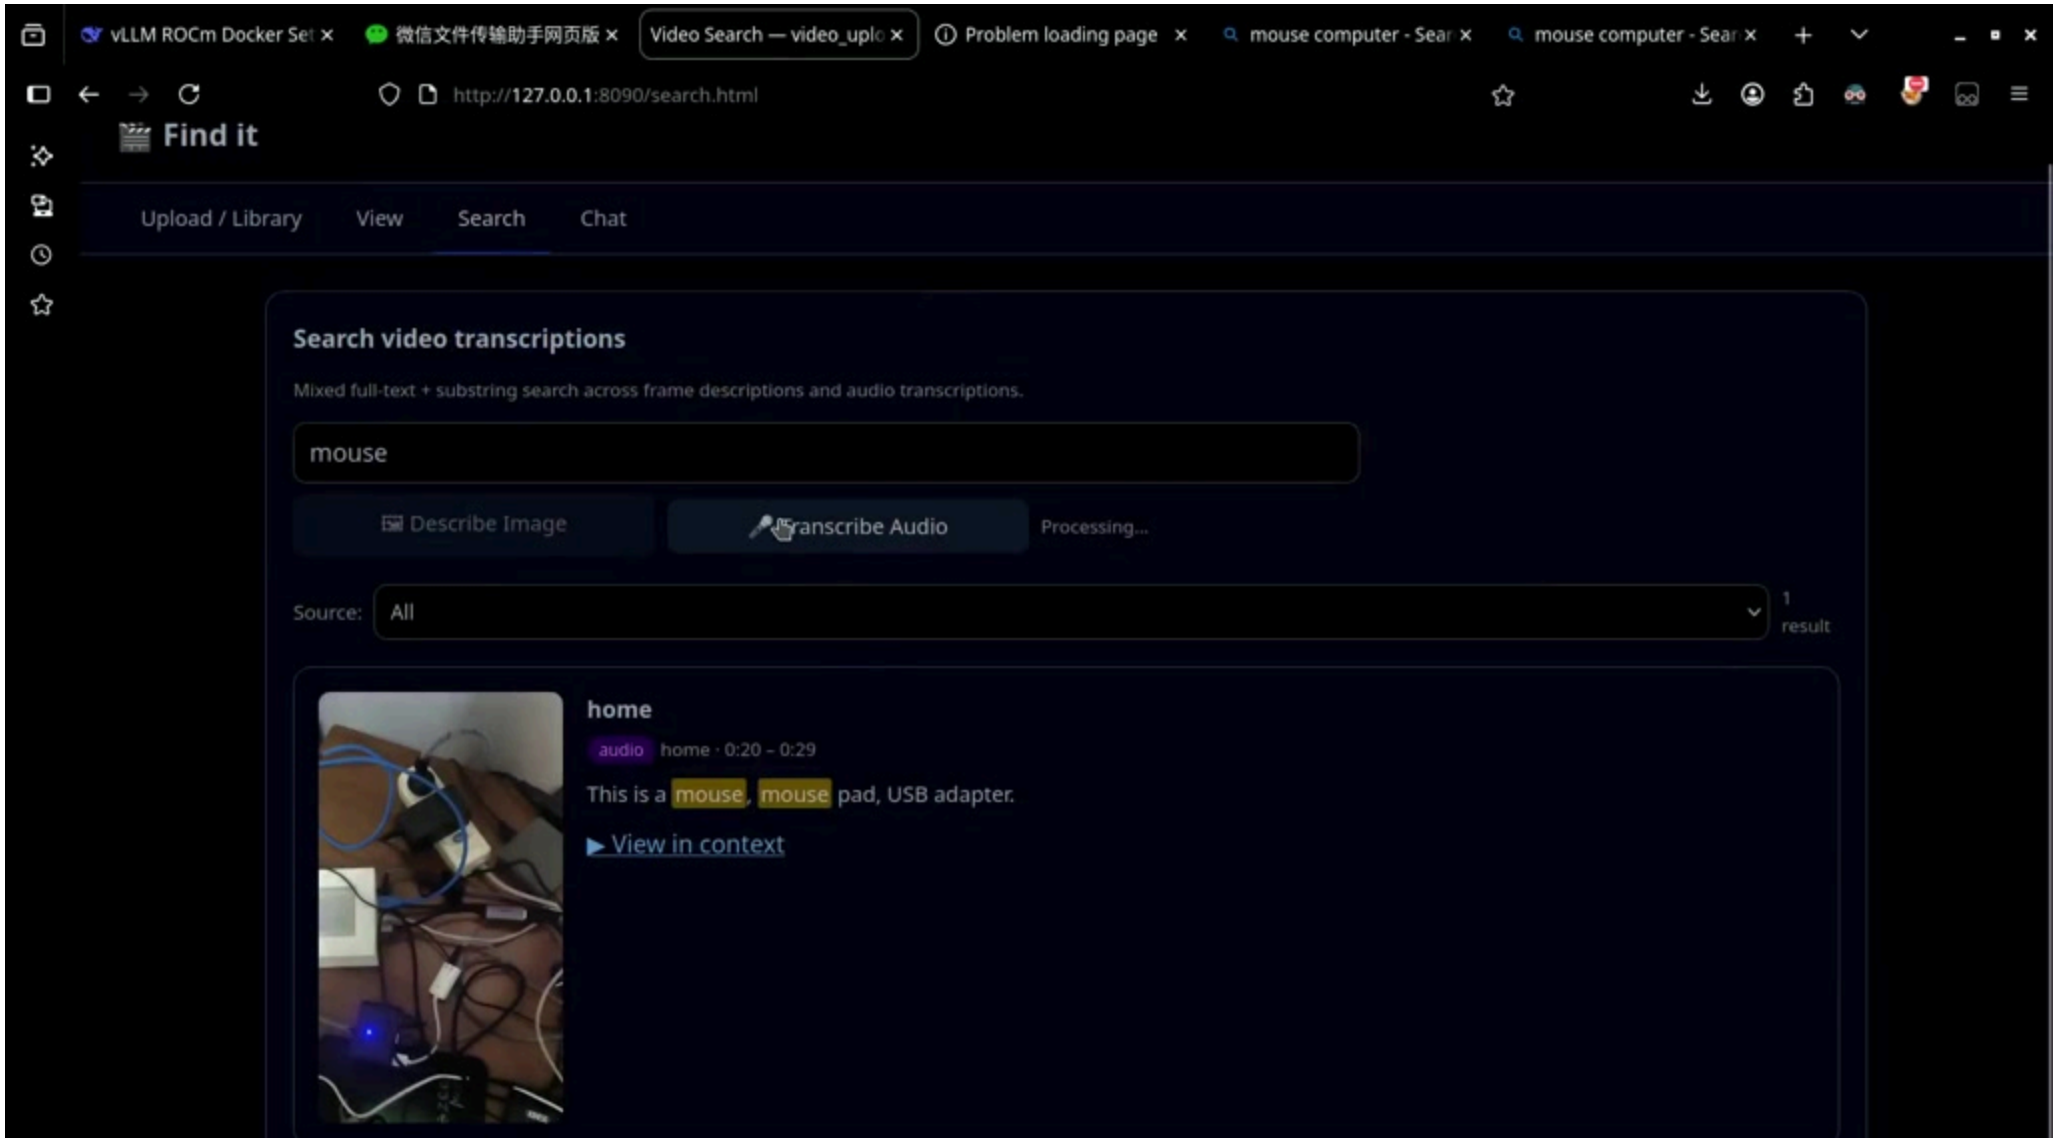

Architecture

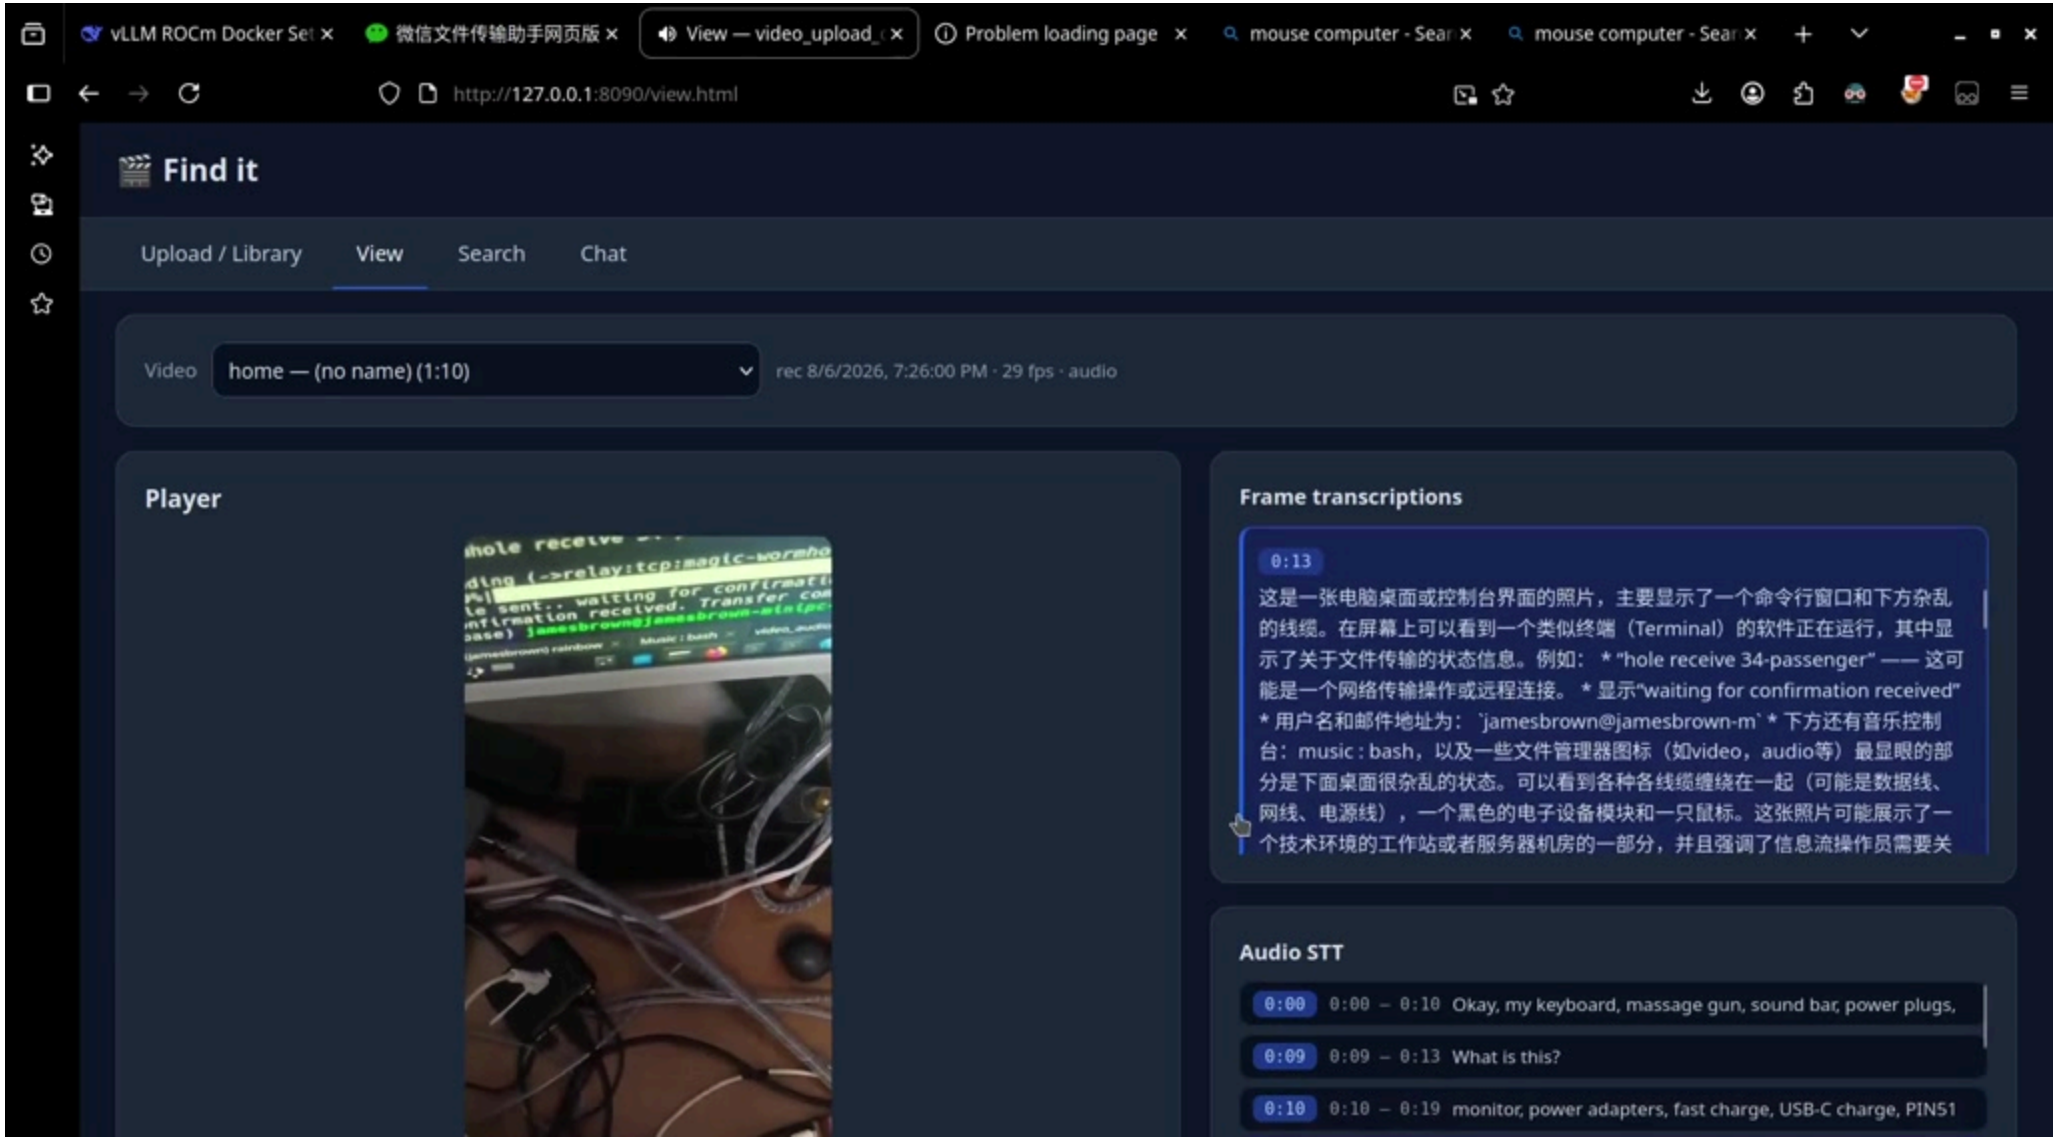

Feature: upload and catalogue

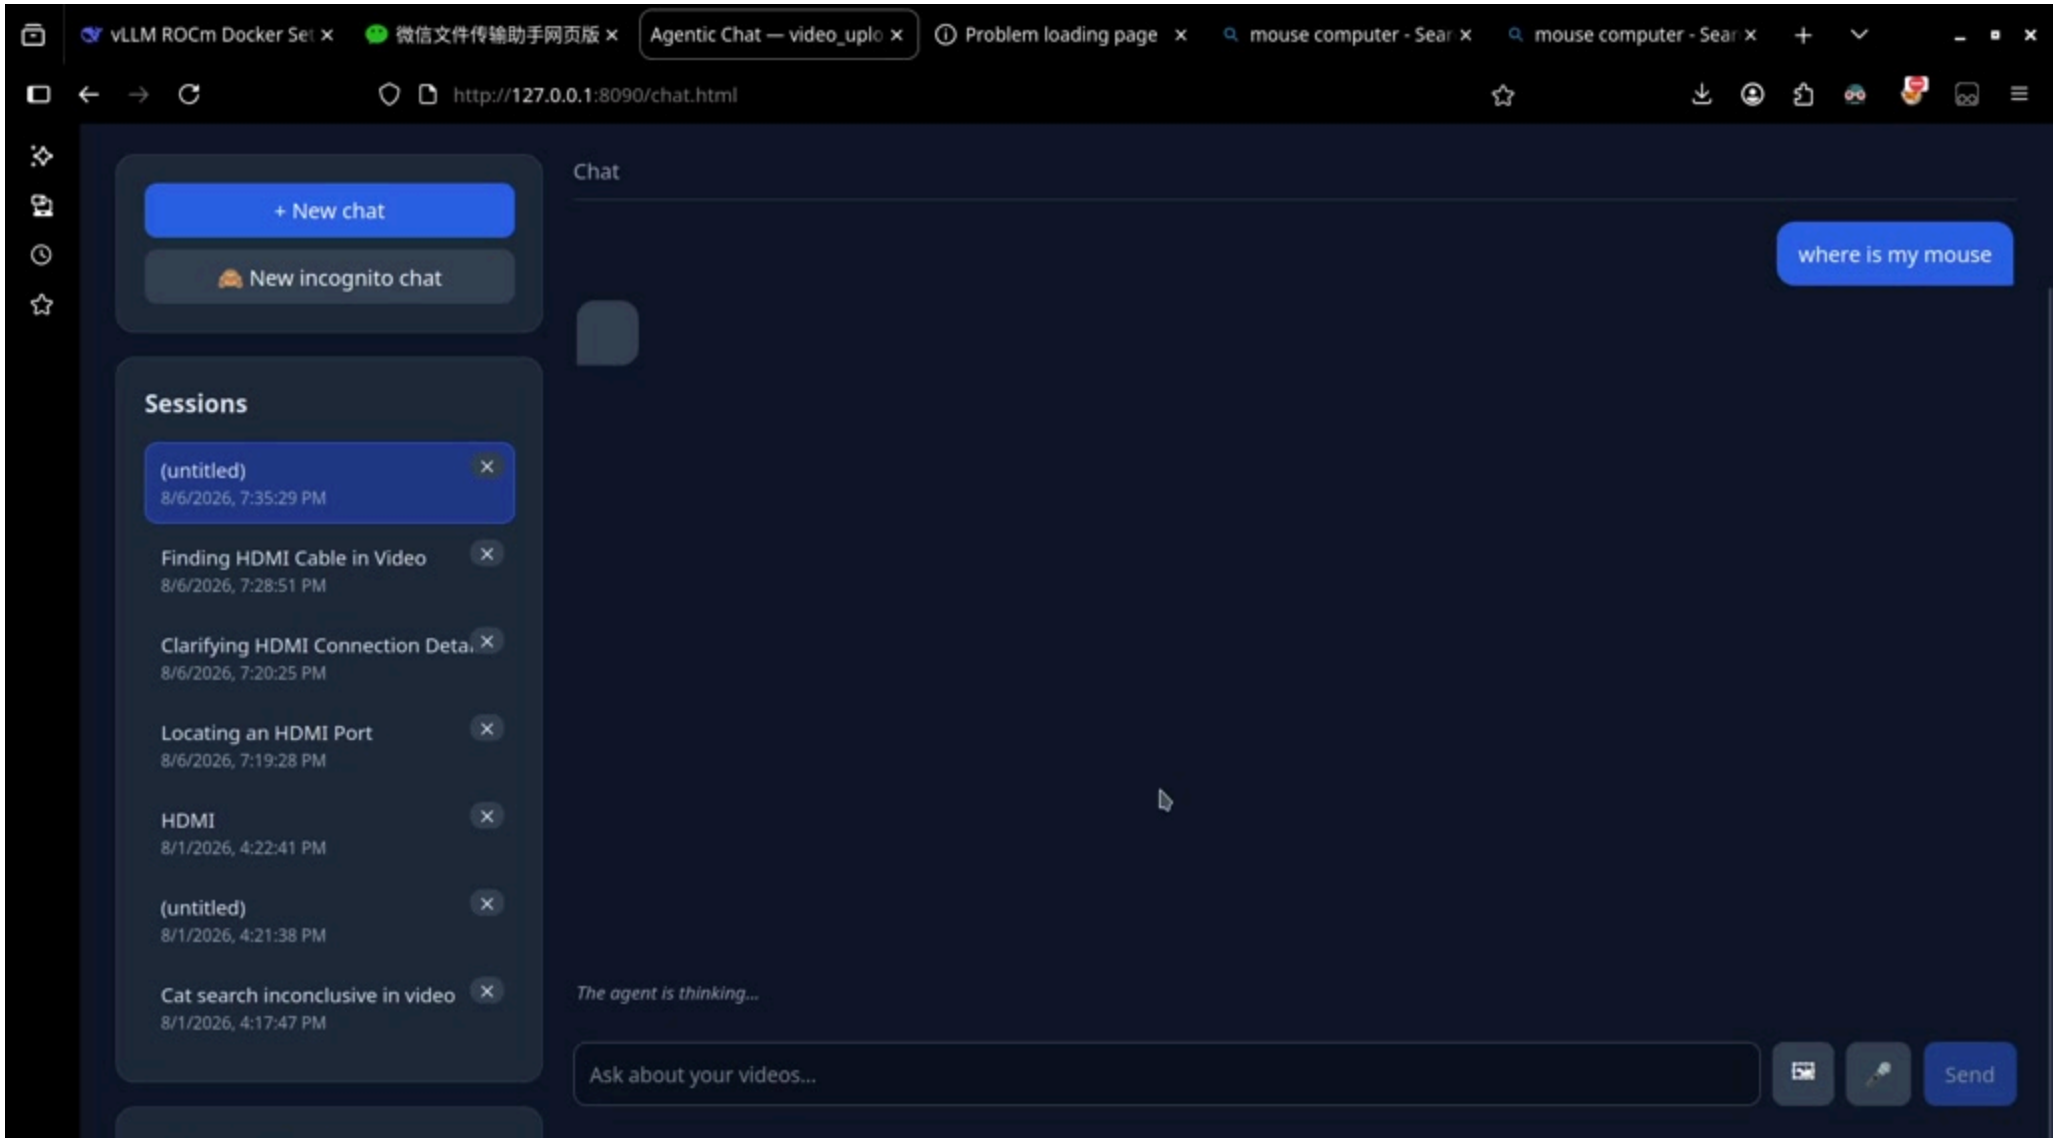

Feature: full-text search

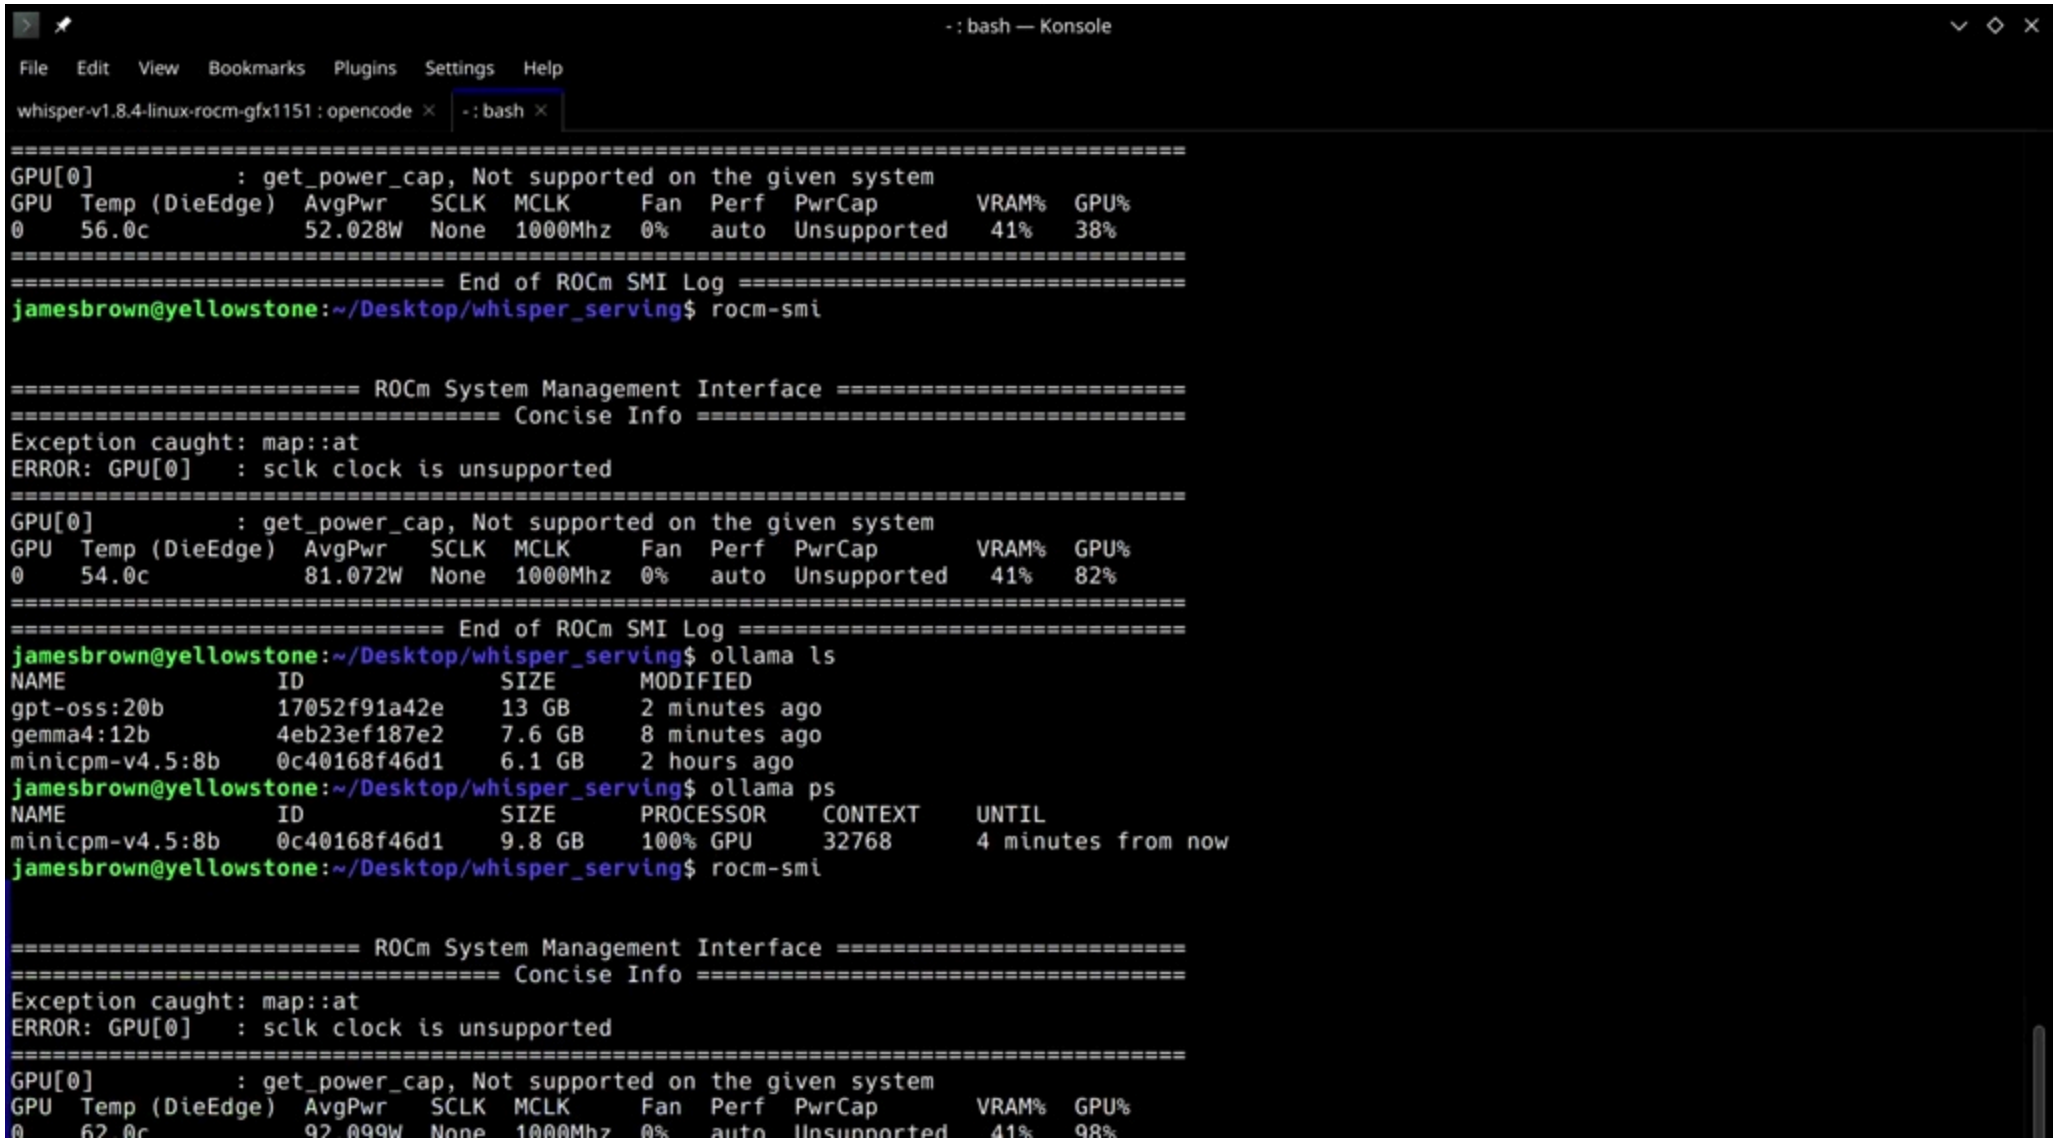

Feature: view transcription by video player

Feature: agentic chat with back-references

Local inference on AMD GPU

Stack and deployment

Layer	Tool
Web backend	Python + FastAPI
Database	SQLite + FTS5
Media	ffmpeg / ffprobe
Vision model	`minicpm-v4.5:8b` via Ollama
Agent model	`gpt-oss:20b` via Ollama
Speech-to-text	`whisper.cpp` Vulkan server
Packaging	Dockerfiles + launch scripts

Local deployment plan

```
# 1. Python environment
./setup.sh

# 2. AI backends
./scripts/setup_ollama.sh
./scripts/setup_whisper.sh
./scripts/start_ollama.sh
./scripts/serve_whisper.sh

# 3. Launch
./launch.sh
```

Open http://localhost:8090.

Thank you

Find it — locate anything in your videos, locally and privately.
