LIFE IN MOTION

# LifePreview

An AI-powered platform for generating and experiencing life stories

*Unearth a story. Experience a life.*

TRACK 1 · MULTIMODAL AI

USER PAIN POINTS

# We remember the label, but rarely see the life behind it.

Profiles provide facts, short videos provide fragments, and biographies provide depth. What is missing is a way to understand a person that is fast, immersive, and open to deeper exploration.

01

## Profiles

Clear on facts, but often reduced to labels—hiding how experience shaped the person.

02

## Biography Videos

Easy to absorb,but fixed to one creator's viewpoint.

03

## Long-form Biographies

Rich in depth, but time-intensive and not always focused on the user's question.

**Users need a path from quick understanding to deeper connection.**

PROJECT OVERVIEW

# LifePreview makes biographies immersive

It is not an encyclopedia or merely a library of pre-made videos. It is an AI-powered platform for generating and experiencing human life stories.

01 The Gap

- Complex, scattered source material
- Life events without causal context
- Stakes and choices that are hard to feel
- Perspectives preselected by creators
- No path for users to follow their own questions

02 The Value

- A coherent life arc in about 90 seconds
- Defining moments that reveal conflict, choice, and cost
- Deeper exploration led by the user’s curiosity

PRODUCT MODEL

# Three layers turn a life into an experience

Start with the life arc, enter a defining moment, then generate a story around the question that matters to you.

## Validated Today

Life Overview — A life in ~90 seconds

Curated Moments — One defining chapter

Interactive Demo — Three figures

## Next Stage

Custom Journey — A person or question

Director's Preview — Confirm direction

Background Generation — Final film

**Ninety seconds is not the whole life. It is the doorway.**

CURRENT RESULTS

# Three lives prove the storytelling system

Steve Jobs, Frida Kahlo, and Su Dongpo span cultures, eras, and visual languages—testing LifePreview's narrative adaptability.

| | | |
|---|---|---|
| 01 | Life Overviews | Three films of about 90 seconds, each building a coherent life arc |
| 02 | Curated Moment | One film explores the birth of Apple in the Jobs family garage |
| 03 | Cross-style Validation | Three eras and visual languages test generation across different lives |
| 04 | Interactive Demo | A complete journey from figure selection and profile browsing to video playback |

PRODUCT MODEL

# Enter a life. Follow your curiosity deeper.

The current demo completes the viewing journey. Next, question-driven generation will let users co-direct the story.

01
## Select a Figure
Jobs, Frida, or Su Dongpo

02
## Life Overview
A life arc in about 90 seconds

03
## Curated Moment
One chapter that changed everything

04
## Ask a Question
A person, event, or question

05
## Generate
Preview first, then generate in background

Available Now

Steps 1–3 ready to watch

Next Stage

Steps 4–5 enable one-click generation

CORE INNOVATION

# The real innovation is scalable human understanding

LifePreview connects narrative intelligence, progressive discovery, and multimodal production in one product system.

01

## Narrative Intelligence

Rebuild turning points, causality, and emotional arc—not a list of dates.

02

## Progressive Discovery

See the life, enter the moment, then follow your own question deeper.

03

## Reusable Generation

One AI pipeline adapts across people, eras, themes, and visual languages.

Stories no longer need one fixed version. Every user can enter through a question that matters to them.

AI GENERATION PIPELINE

# Four films, one reusable AI generation pipeline

From research to final delivery, AI powers the core creative workflow.
Today, films are generated offline and connected to the demo.

01

## Research

Zhipu MCP gathers sources, facts, and provenance.

02

## Narrative Planning

Qwen selects key events and builds story, narration, and shots.

03

## Identity References

Trusted references across ages and angles anchor identity.

04

## Character Assets

FLUX.2 creates consistent multi-angle characters and scenes.

05

## Native Audio-Video

MiniMax H3 generates visuals, voice, and atmosphere.

06

## Film Delivery

Today: review + integration.
Next: automated QC and shot repair.

## Progress

Current models: Zhipu MCP · Qwen3.7-Plus · FLUX.2 · MiniMax H3 Ref2VA
Runtime: AMD Radeon gfx1100 · ROCm 7.2.1 · PyTorch 2.9.1 · ComfyUI
Next: Async jobs · Automated QC · Selective shot regeneration · Reliable delivery

AMD COMPUTE FOUNDATION

# One AMD foundation powers the multimodal workflow

The core workflow runs today. Next, the same foundation will support asynchronous jobs, automated quality control, and selective shot regeneration.

## Runtime Proof

01 | AMD Radeon gfx1100
Runs character asset and video generation.

02 | ROCm 7.2.1
Provides a unified model runtime.

03 | PyTorch 2.9.1 + ComfyUI
Orchestrates the local multimodal workflow.

04 | Serial generation on one GPU
Powers offline production for the current demo.

## Productization Roadmap

05 | Asynchronous Jobs
Remove the 10+ minute foreground wait.

06 | Automated Quality Control
Detect distortion, blur, flicker, and consistency failures.

07 | Selective Shot Regeneration
Regenerate only failed shots—not the entire film.

08 | Recovery and Delivery
Resume from safe checkpoints and return the final film.

# A life won’t fit.

# But a doorway can.

Unearth a story. Experience a life.
A new doorway into remarkable human stories.
