AetherDB V1.31.2

世界观数据库与长篇创作引擎 / Worldbuilding and Long-form Writing Engine

AMD Radeon Hackathon 2026-07 • Track 1

Local-first · Multimodal · Reviewable AI · Verifiable ROCm

AetherDB 将写作工作台、结构化世界观数据库、混合检索、多模态素材和可审核 AI 流程整合为本地桌面应用。
AetherDB combines a writing workspace, structured lore database, hybrid retrieval, multimodal assets, and reviewable AI workflows in one local desktop application.

创作 / Writing

长篇写作、自动保存、AI 分析、实体抽取与冲突检查。
Long-form writing, autosave, AI analysis, entity extraction, and consistency checks.

检索 / Retrieval

BGE-M3 + FTS5 + sqlite-vec
支持跨章节语义召回。
BGE-M3, FTS5, and sqlite-vec support cross-chapter semantic recall.

多模态 / Multimodal

BGE-VL 图文检索、Kokoro TTS 与受管理的媒体素材。
BGE-VL retrieval, Kokoro TTS, and managed media assets.

安全 / Security

本地数据、请求头认证、能力门与作者确认边界。
Local data, header-only auth, capability gates, and author approval boundaries.

系统架构 / System Architecture

Vue 3 + Tauri 2
桌面创作与状态呈现
Desktop authoring UI

→

FastAPI
约 279 个 API method/path
Auth + capability gates

→

SQLite + Retrieval
Alembic · FTS5 · sqlite-vec
Local structured lore

→

Isolated Workers
BGE-M3 · BGE-VL · TTS
ROCm / CUDA / CPU

模型与创作流程 / Models and Creative Loop

Model	Use / 用途	AMD backend
BGE-M3	Multilingual RAG / 多语言检索	ROCm/MIGraphX
BGE-VL	Image-text retrieval / 图文检索	ROCm PyTorch
Kokoro 82M	Narration / 章节朗读	ROCm PyTorch
Kandinsky 2.2	Optional image generation / 可选图像生成	ROCm PyTorch

可验证 ROCm / Verifiable ROCm

设备探测 → PyTorch HIP 实算 → 模型包校验 → Worker 证据 → 比赛策略
Device probe → real HIP compute → package verification → worker evidence → competition policy

REQUIRE_ROCM=true · ALLOW_SILENT_FALLBACK=false

AMD 后端或模型证据不可用时，任务被阻止。
Tasks are blocked when AMD execution or model evidence is unavailable.
