AUTOMATION PLATFORM OVERVIEW

Omni Adjust AI Automation Platform

Streamlining workflows for

Small & Large Businesses

PRESENTED BY

Product Team

DATE

July 2026

Presentation Agenda

Agenda Overview

01

Platform Overview

Introduction to Omni Adjust AI capabilities, navigation structure, and target use cases.

02

Core Modules

Documents, voice agents, and dashboard navigation — the platform's backbone.

03

Dashboard & Analytics

7-day activity overview, recent calls, notifications, and quick actions.

04

Business Impact

Strategic recommendations and outcomes for small and large businesses.

Unified AI Automation for Modern Business

Intelligent Document Processing

Auto-generate agreements, invoices, quotations, certificates, offer letters, and purchase orders in seconds.

Voice-First Agent System

Test conversations, voice recognition setup, agent status monitoring, and recent call logs in one interface.

Real-Time Analytics

7-day activity overview, instant notifications, and quick actions like start chat, voice call, or document send.

Platform Core Modules

Core Navigation Pillars

Unified Workspace

Documents Module

Generate, store, and manage business documents through a single intelligent workspace.

- Agreement & Invoice
- Quotation & Certificate
- Offer & Experience Letters
- Purchase Order & Reports

Voice Agents

Train, test, and monitor AI voice agents with full conversation visibility.

- Test Conversation Setup
- Voice Recognition Config
- Agent Status Dashboard
- Recent Call Logs

Dashboard & Analytics

Centralized view of activity, notifications, and one-click quick actions.

- 7-Day Activity Overview
- Recent Activity Feed
- Live Notifications
- Quick Actions Toolbar

Platform Setup Workflow

Implementation Workflow

1

Platform Setup

Configure navigation
Enable modules
Set user permissions

2

Document Config

Upload templates
Define workflows
Map approval chains

3

Voice Training

Test conversations
Train recognition
Activate agents

4

Go Live

Monitor dashboard
Review notifications
Tune quick actions

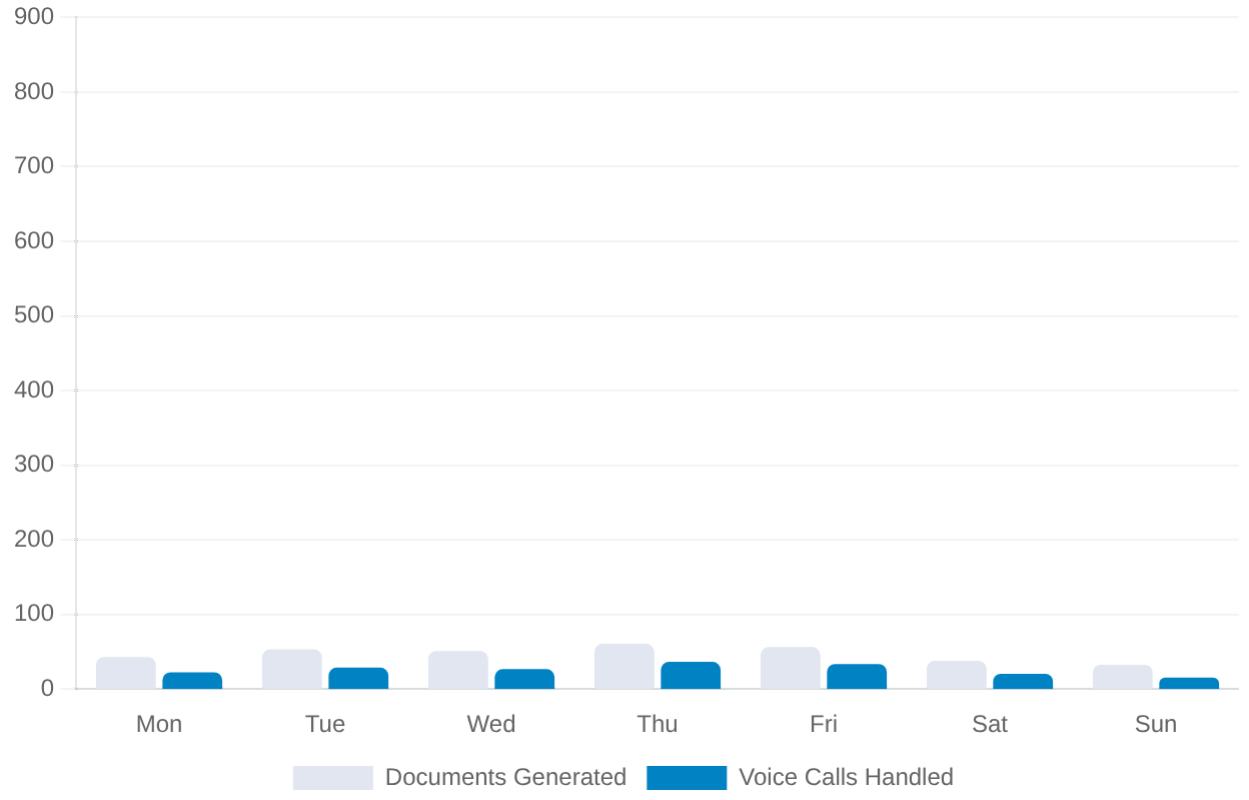

Key Implementation Note

Most small businesses complete setup within 48 hours; large enterprises typically run a 2-week phased rollout covering document workflows first, followed by voice agent activation across departments.

Dashboard Activity Overview

7-Day Performance Snapshot

Weekly Activity — Documents Generated vs Calls Handled

Avg Response Time

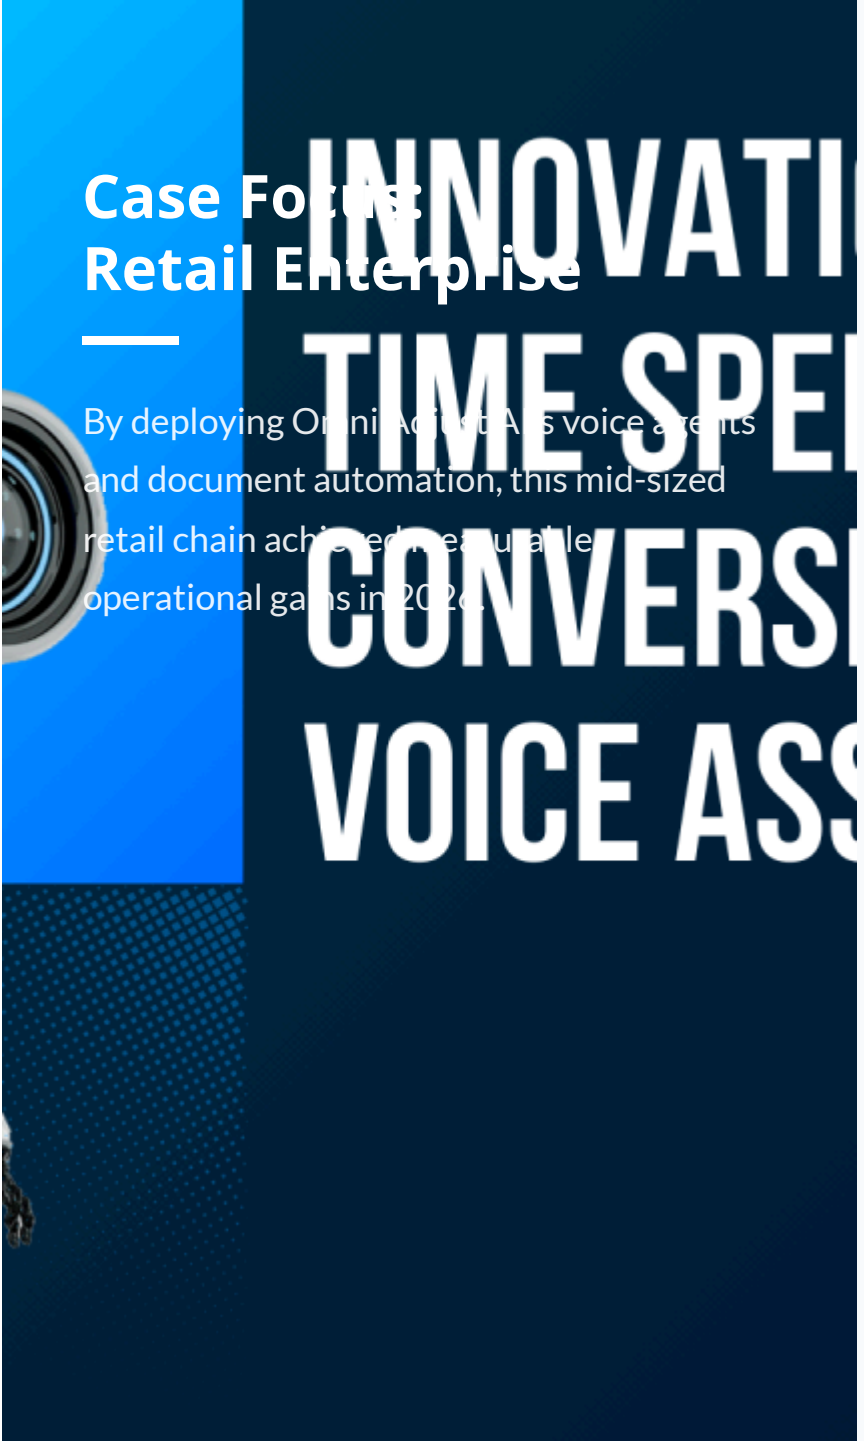

8.2s (-12%)

Documents Processed

4,520 (+8.5%)

Voice Recognition Accuracy

96.4% (+1.2%)

Case Focus: Retail Enterprise

By deploying Omni Active AI's voice agents and document automation, this mid-sized retail chain achieved measurable operational gains in 2024.

Improvements & Outcomes

Challenges Faced

- Manual invoice & PO processing (3.5 days avg)
- Inconsistent customer follow-up calls
- Fragmented reporting across store locations

Strategies Deployed

- Automated quotation & PO workflows
- Trained 6 voice agents for customer follow-up
- Unified analytics dashboard across all stores

Measurable Results

DOC TURNAROUND	PRODUCTIVITY	SATISFACTION
1.2 days	+24%	98.5%

Strategic Recommendations

For Small & Large Businesses

Scale Voice Agent Deployment

Extend voice agent coverage to 24/7 operations with multi-language support. For large enterprises, deploy department-specific agents; for small businesses, start with a single customer-support agent and expand iteratively.

Expand Document Automation

Integrate agreements, invoices, quotations, certificates, offer letters, experience letters, and purchase orders with existing ERP/CRM systems. Build template libraries tailored to industry-specific compliance requirements.

Enhance Analytics & Quick Actions

Move beyond 7-day activity overviews toward predictive insights. Customize quick actions (start chat, voice call, send document, upload knowledge) per role, and surface proactive notifications for high-priority events.

Summary & Outlook

Automation Intelligence Scale

End-to-End Workflows

Unify documents, voice agents, and analytics in one platform — eliminating silos across teams.

Voice-First AI

Train agents, test conversations, and monitor recognition accuracy with real-time feedback loops.

Built for All Sizes

From small business quick-start templates to enterprise-grade multi-agent deployments.
